

YouTube Research: cheat sheet

Type **research <topic>** in Discord. Free. No Blotato credits. Public numbers only.

Say this

You say	You get
research true crime shorts	25 videos + a scorecard
research true crime, most viewed, this year, under 4 min	same, filtered
find outliers in true crime	small channels that blew up
insights	a plain report: what's true, what's a guess, what needs Studio

Filters: most relevant / newest / most viewed · today / week / month / year · under 4 min / 4-20 / over 20 · 1-50 videos

You get, per video

- Views, likes, comments, length, date, tags, captions, language
- Channel: subscribers, total views, video count, country, age

The scorecard

Number	Means
Median views	what a normal video does here (ignore the average)
Views per day	views adjusted for age: new video with 500k beats old one with 2M
Reach vs subs	views / subscribers. 595x = tiny channel went huge. The outlier finder.
Interaction rate	(likes + comments) / views. Did people care?
Length mix	Shorts niche or long-form niche?
Recency mix	is the niche still alive?
Recurring tags	the niche's vocabulary
Channel concentration	does one creator own it?

Example: true crime shorts, 10 videos

- Typical video 1.7M views; biggest 9.8M
- 4 Shorts, 5 long docs: filter by length next time
- 9 of 10 over a year old
- One video at 595x its channel size: a breakout
- No single channel dominates

Can't do

- Watch time, CTR, retention, revenue, demographics (owner-only Studio data)
- Search volume or trends (it's one snapshot)
- See the thumbnail picture or read comments

Limits

- About 95 runs a day, free
- Key is in .env, never pushed to GitHub

Files: .agents/skills/youtubepro/ · Output: channels/<name>/research/<topic>/ · ideas/script/thumbnail are written but parked until generation work is done.
